

# PAMPERING YOUR CAR

## WITH AUTOBRILL'S PAINT SEALANT

**STORY AND PHOTOS** PETER TARACH

The reason why AutoBrill has garnered much attention as of late is because of its product makeup. It is a non-abrasive wax sealant that does not contain Teflon, silicone, petroleum or acrylic particles. All of which have proven not to last on a car's finish over time due to the fact that soap breaks down oils.

## TECH/TEST

PHANTOM PAINT TREATMENT

**AutoBrill leaves the car with a wet look, enhances the true pigment color in the paint, and no oily marks or residue are left. It's incredible the difference this substance has made to the car's appearance. The Phantom now jumps out at you, the glare in the sun is almost blinding.**

much attention as of late is because of its design makeup. It is a non-abrasive wax sealant that does not contain Teflon, silicone, petroleum or acrylic particles. All of which have proven not to last on a car's finish over time due to the fact that soap breaks down oils. Because it doesn't contain any sort of abrasive agents there is no loss of the clear coat layer from the paint. Instead the nano-particle technology allows the wax to bond with the car's paint on a molecular level. This makes it an excellent choice for collector cars and rare exotics where the original paint must be retained to preserve resale value. Once the sealant has been applied, the clearcoat is left with a microscopic film of approximately 1/10mm that protects the clearcoated/painted surface from scratching and also provides lubrication during washing. Any empty spaces in the clearcoat (swirls) are filled with the nano-particle based sealant, hiding the finest swirls that may already be in the paint. AutoBrill is also durable in all types of weather and temperatures from cold northern climates to sun scorched environments.

The other innovative feature is that AutoBrill works equally well on windshields, glass, metal and plastic surfaces. Many times you have to keep wax away from the plastic trim on a vehicle as it causes that dreaded white haze that is next to impossible to rub off – not the case here. Apply it on plastic as you would on the paint. AutoBrill is a great wax on wheels as well, it protects against dust build up that can permanently stain your car's wheels after a couple months. AutoBrill is also a dust free product – it does not dry out while being applied and will not cause swirl marks, or scratching when being removed.

We were invited out for a test demonstration by ExoticCARE, an exclusive distributor of the AutoBrill line. The test subject, a black 2005 Rolls

**T**HERE comes a time in everyone's life where a decision is made to spoil themselves and make a frivolous purchase based solely on their wants and not their needs. Usually, it is an item that has been desired for quite some time but unattainable until now. For the car guy it's usually their dream car – a Porsche, maybe a Ferrari, or even a classic Corvette. We all have different tastes and different likes but one thing is for sure, when we park that car in the driveway or take it out for a brisk Sunday run, it's got to look its best. After all what would your pride and joy be without the extravagant paint?

The paint job, factory or not, needs attention to maintain its brilliant finish too. And most car nuts are religious about using nothing but the finest motor oil in their motors so why not do the same for the paint?

Every car care manufacturer likes to think their product is the best on the market but results speak much louder than words and when we heard that some local exotic car dealerships are applying a new paint sealant to their brand new cars with exceptional results we needed to take a closer look.

The product is called AutoBrill, a nano-particle based paint sealant that is applied after a triple stage preparation process. AutoBrill enhances your cars finish for approximately one year (around 6,000-9,000 miles). Variables do come into play here, obviously if you drive your vehicle more, wash it extensively or leave it sitting outside constantly then it won't last as long but AutoBrill has found that on average you can apply this treatment to your car once a year and not have to worry about it.

The reason why AutoBrill has garnered

**AutoBrill, a nano-particle based Paint Sealant that is applied after a triple stage preparation process and enhances your car's finish for approximately one year (around 6,000-9,000 miles).**

Because it doesn't contain any sort of abrasive agents there is no loss of the clear coat layer from the paint. Instead the nano-particle technology allows the wax to bond with the car's paint on a molecular level. This makes it an excellent choice for collector cars and rare exotics where original paint is at a premium.

Royce Phantom. Black paint, some may argue is the hardest color to maintain as every nick, scratch and dent can be seen. But because of the Phantom's already flawless paint job there was no need to hide any major scratches or flaws. ExoticCARE was going to show us how AutoBrill can improve the Phantom's paint. Truth be told, we were a bit skeptical, the Phantom had an immaculate factory paint

job that already glistened and factor in that it was just washed and it was going to be hard to tell a difference ... or so we thought.

Andrew Revai and Alex Niederfahrendorst, co-owners of ExotiCARE went to work and demonstrated each and every step of the AutoBrill paint sealant process. First they hand washed and chamois dried the car, then the first step began by using a clay bar to remove all the debris that has been caught up in the paint. They then switched to the liquid silica based compound with an orbital buffer to polish the clearcoat, that has microscopic and hair line scratches (swirl marks). The final stage of the process is to apply the AutoBrill paint sealant using an orbital buffer and a special foam pad to infuse the AutoBrill into the paint. Finally, a quick wipe down with MicroFiber towels finishes the process off. A random orbital buffer is used as most times inexperienced detailing shops may use rotary buffers, which tend to swirl/burn the paint as the car is being polished.

Call to book AutoBrill clinics for groups of three cars or more - all over the US and Canada

Much to our surprise, the before and after results were actually noticeable. AutoBrill leaves the car with a wet look, enhances the true pigment color in the paint, and leaves no oily marks or residue. It's truly incredible what a difference a substance in a bottle can do to a car's paint. The Phantom now jumps out at you, the glare in the sun is almost blinding. Needless to say we were impressed. The car will bead and shed water beautifully. In fact driving in the rain at highway speeds it's very noticeable that the car's panels will repel the rain,

**Shown here is the AutoBrill triple stage protection process being applied to the Phantom. The professionals at ExotiCARE make it look quick and easy, hitting the paint with their clay bar then using a silica based compound to polish the clearcoat and finally applying the AutoBrill paint sealant for a brilliant finish.**

making the panel almost dry looking.

The end result leaves you with a show-quality car finish, easier washing, simple rinsing and dirt that won't stick to the surface as easily. The AutoBrill paint sealant is all natural and is environmentally friendly – and is backed by its long-lasting characteristics. ExotiCARE even leaves clients with a special detailing nano-spray

(touch up) that should be used on the car after washes to regenerate the nano particle finish.

One final note – if a car requires body work, AutoBrill does not require stripping unlike most conventional Teflon based paint sealers. It can be painted right over.

The basic AutoBrill paint sealant treatment retails for \$375.00 and

ExotiCARE undertakes everything from start to finish. Look for authorized AutoBrill applicators coming to your area soon! For cars with scratches and swirls, ExotiCARE offers polish compounds that can significantly reduce visible lines and swirls for both heavily or lightly damaged paints. AutoBrill is guaranteed to last for up to a year or 6,000 miles. **MLB**
